2 Задание (к оглавлению)

- 1. Выберите набор данных (датасет) для решения задачи классификации или регрессии.
- 2. В случае необходимости проведите удаление или заполнение пропусков и кодирование категориальных признаков.
- 3. С использованием метода train_test_split разделите выборку на обучающую и тестовую.
- 4. Обучите следующие модели:
 - одну из линейных моделей (линейную или полиномиальную регрессию при решении задачи регрессии, логистическую регрессию при решении задачи классификации);
 - SVM:
 - дерево решений.
- 5. Оцените качество моделей с помощью двух подходящих для задачи метрик. Сравните качество полученных моделей.
- 6. Постройте график, показывающий важность признаков в дереве решений.
- 7. Визуализируйте дерево решений или выведите правила дерева решений в текстовом виде.

3 Описание датасета (к оглавлению)

Digital payments are evolving, but so are cyber criminals.

According to the Data Breach Index, more than 5 million records are being stolen on a daily basis, a concerning statistic that shows - fraud is still very common both for Card-Present and Card-not Present type of payments.

In today's digital world where trillions of Card transaction happens per day, detection of fraud is challenging.

This Dataset sourced by some unnamed institute.

Feature Explanation:

 $\verb|distancefrom| from home where the transaction happened.$

distancefromlast_transaction - the distance from last transaction happened.

ratiotomedianpurchaseprice - Ratio of purchased price transaction to median purchase price.

repeat_retailer - Is the transaction happened from same retailer.

 ${\tt used_chip} \ \ \hbox{- Is the transaction through chip (credit card)}.$

usedpinnumber - Is the transaction happened by using PIN number.

online order - Is the transaction an online order.

fraud - Is the transaction fraudulent.

4 Импорт библиотек (к оглавлению)
